

## Mathematics in Application Tasks

Frequently asked students of Bachelor's study is what mathematics is good for them? We have therefore enrolled students of higher bachelor and engineering courses in the preparation of examples where topics in bachelor mathematics appear in professional problems. To date, students have worked on 12 subjects from subjects taught at **Faculty of Mining and Geology**

and **Faculty of Metallurgy and Materials Engineering**. We have ensured that the mathematical apparatus used is without error. Our cooperation will continue.

Motivational tasks will be used in the teaching of mathematics and descriptive geometry.
